Dec 12-10:57 AM

Graph $y = 0.25^x$

List Horizontal
AsymptoteDomain, Range
and 2 key
pts for each
exponential
function

May 5-9:21 AM

Graph $y = 0.25^x$

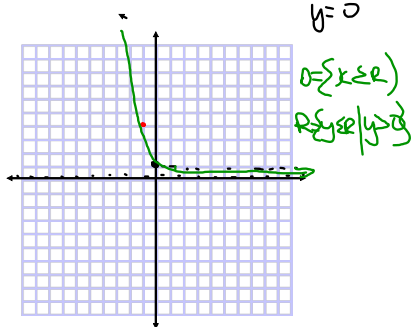

$$y = 0.25^x$$

$$y = 0.25^{-1}$$

$$y = \frac{1}{0.25}$$

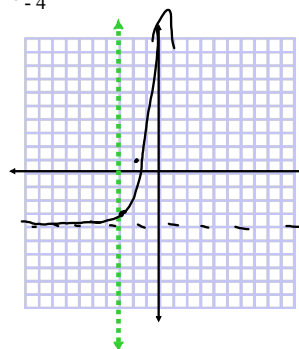

$$y = \frac{1}{0.25}$$

$$y = 4$$

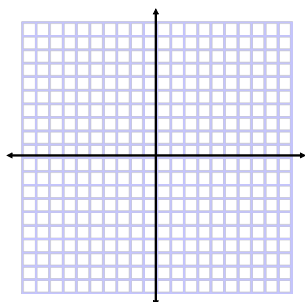

May 5-9:21 AM

Graph $y = 5^{x+3} - 4$

May 5-9:21 AM

Graph $y = 5^{x+3} - 4$

May 5-9:21 AM

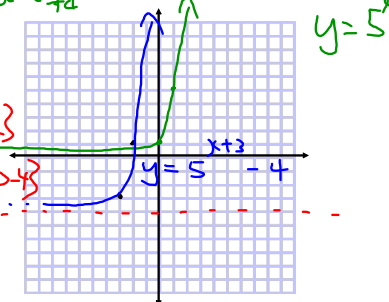

Graph $y = 5^{x+3} - 4$

$$y = ab^{x-d} + d$$

$$y = -4$$

$$D = \{x \in \mathbb{R}\}$$

$$R = \{y \in \mathbb{R} | y > -4\}$$

May 5-9:21 AM

9. A biologist measures 1000 yeast cells in a culture at 12:00 noon. She predicts that, under current conditions, the culture should double every 50 min.
- Sketch a graph of the population of this culture for 200 min after noon.
 - Use your graph to determine the population of the culture in 2.5 h.
 - How can you adapt the graph to determine what the population of cells was 3 h *before* noon?

Dec 8-1:29 PM

graph 12:00 noon

$$P(n) = P_0(1+r)^n$$

$$P(n) = P_0(1-r)^n$$

$P_0 = 1000$
 $r = 1.0$
 $n = 4$ $\frac{200}{50}$
 $P(n) = 1000(1+1.0)^4$
 $P(n) = 1000(2)^4$

0.22

$P(n) = 16000$

May 6-11:01 AM

14. Jerry invests \$500 in a bond that pays 5% per year. He will need the money for college in 3 years.
- Write an equation that models the growth of the money.
 - Use the equation to determine how much Jerry will have at the end of 3 years.
 - How much money did his \$500 earn in the 3 years?
 - Jerry thinks that if he keeps his money invested for twice as long (6 years), he will earn twice as much. Is this true? Explain your reasoning.

Dec 8-1:29 PM

$$P(n) = P_0(1+r)^n$$

$$P(n) = 500 \quad \rightarrow \quad 500(1+0.05)^3$$

$$P(n) = ? \quad = 500(1.05)^3$$

$$r = 0.05 \quad = 500(1.157)$$

$$n = 3 \quad = 578.81$$

$500(1.05)^6$
 $500(1.340)$
 670.05

May 6-11:14 AM

1. Evaluate without using a calculator.

- 5^{-3} $\frac{1}{5^3} = \frac{1}{125}$
- $\left(\frac{3}{4}\right)^{-2}$ $\frac{4^2}{3^2} = \frac{16}{9}$
- $16^{-0.75}$ $\frac{1}{16^{0.75}} = \frac{1}{(2^4)^{0.75}} = \frac{1}{2^3} = \frac{1}{8}$
- $\left(\frac{1}{10}\right)^{-2}$ $10^2 = 100$

2. Write as a single power. Express answers with positive exponents.

- $(6)^{-3} \times (6)^5$ 6^2
- $\frac{10}{10^{-4}}$ 10^5
- $\frac{a^7}{a^2}$ a^5
- $\frac{b^3}{b^5}$ b^{-2}

3. Write $\sqrt[3]{4}$ in exponent form, then evaluate.

$$4^{\frac{1}{3}}$$

$\sqrt[3]{4} = 4^{\frac{1}{3}}$
 $\sqrt[3]{64} = 4$
 $\sqrt[3]{64} = 4$
 $\sqrt[3]{64} = 4$

Dec 8-1:27 PM

- $\left(\frac{3}{4}\right)^{-2}$ $\frac{4^2}{3^2} = \frac{16}{9}$
- $16^{-0.75}$ $\frac{1}{16^{0.75}} = \frac{1}{(2^4)^{0.75}} = \frac{1}{2^3} = \frac{1}{8}$
- $100^{\frac{-3}{2}}$ $\frac{1}{100^{1.5}} = \frac{1}{1000}$

2. Write as a single power. Express answers with a positive exponent.

- $(6)^{-\frac{1}{3}} \times (6)^{\frac{5}{6}}$ $6^{\frac{1}{2}}$
- $\frac{10}{10^{-4}}$ 10^5
- $a^7(a^6)^{-2}$ a^{-5}
- $4\left(\frac{1}{4}\right)^{-4}$ 4^5
- $\frac{7^8}{(7^2)^3}$ 7^2
- $\frac{b^3(b^{-2})}{b^4}$ b^{-3}

3. Write $\sqrt[6]{4}$ in exponent form, then evaluate.

$$4^{\frac{1}{6}}$$

Dec 8-1:27 PM

7. The population of a small town has increased at a rate of 1.5% per year since 1980. The town had a population of 1600 that year.
- Write the equation that models the growth in population of the town. Describe each part of your equation.
 - Use your equation to determine the population of the town in 2008.

Dec 8-1:27 PM
